

Value

Heatmap showing the relationship between threshold values (tresh.2 to thresh.16) and sequence lengths (Len=100 to Len=2000). The color scale ranges from blue (low) to red (high). The heatmap shows that for lower sequence lengths, the relationship is more complex, with higher values for thresholds 10, 12, 14, and 16. As the sequence length increases, the values generally decrease, with the bottom row (Len=2000) being predominantly red, indicating high values across all thresholds.
