

Value

Heatmap showing the relationship between threshold values (tresh.2 to thresh.16) and sequence lengths (Len=100 to Len=2000). The color scale ranges from dark purple (low) to light blue (high). The heatmap shows that for lower sequence lengths, the relationship is more pronounced, with higher values for lower thresholds and lower values for higher thresholds. As the sequence length increases, the values become more uniform across thresholds.
