

Value

Heatmap showing the relationship between threshold values (resh.2 to resh.16) and sequence lengths (Len=100 to Len=2000). The color scale ranges from dark blue (low) to dark red (high). The heatmap shows that for lower sequence lengths, the relationship between threshold and value is more pronounced, with higher values for lower thresholds. As sequence length increases, the values generally decrease and the relationships become less distinct.
